

Release notes (April 2006)

This release notes apply to the component **CRA.clima.ClimReader.dll**

The installation file is a zip which contains:

1. The file ClimReaderTest.zip which contains a console application showing how to use CRA.clima.ClimReader.dll (it includes sample input files, both TXT (Location.txt, Soil.txt, Modena9495.txt) and XML (Modena9495.xml)).
2. The file ModcomClimReader.zip which contains the project of a Modcom application
3. The CRA.clima.ClimReader_help.chm (help file)
4. The CRA.clima.ClimReader_NDoc.chm (code documentation file)
5. The CRA.core.MCE.exe application
6. The component file and relevant libraries:
 - o CRA.clima.ClimReader.dll
 - o CRA.core.preconditions.dll
 - o CRA.Met.dll

Being a MS .NET component, AgroManagement does not require installation, but it does require NET 1.1 and NET2.0 (for the CRA.core.MCE.exe application) installed on the PC. The component and its applications have been tested on Windows XP only.

The application CRA.core.MCE.exe can be used to discover date-types as described in the help.
